Discover the world of infinite possibilities with LightSheer® INFINITY™.
Infinite Treatment Possibilities

2 x 2 x 6 = \infty

Lumenis’ LightSheer INFINITY opens up a world of infinite laser treatment possibilities. Patients from different ethnic backgrounds and with different skin types are increasingly demanding solutions that are tailored to their needs. With the LightSheer INFINITY you can customize treatment and offer the ideal treatment to each one of your patients. The LightSheer INFINITY provides an effective, comfortable treatment\(^1\). It can also offer your patients a solution for pigmented and vascular lesions, PFB and wrinkle reduction.

To meet these needs, the LightSheer INFINITY is equipped with:

- 2 diode wavelengths- 805nm and 1060nm
- 2 advanced technologies
- 3 spot sizes that facilitate 6 treatment options

Technology with Infinite Potential

Dual Wavelength Laser Platform
The LightSheer INFINITY is the first dual wavelength system equipped with a large spot size (22mm X 35mm) and a unique pain reduction mechanism that provides effective, fast and comfortable treatment for all skin types.

The 805nm and 1060nm enable treatment of lighter as well as darker skin types (including tanned skin) all year round.

Faster Treatments
The High Speed Vacuum Assisted technology with the 22X35mm spot size, is now available in both wavelengths, allowing you to perform fast treatment with a high coverage rate.

Comfortable
The INFINITY uses an active pain reduction mechanism which ensures that your patients will experience the most comfortable treatment without the need for gels or anesthetics.

Advanced Graphic User Interface
The LightSheer INFINITY features a state of the art user-friendly interface and effective user support:
- Large touch screen display - Intuitive presets for fast learning curve and easy treatment delegation.
- Remote Connectivity enabled - to ensure prompt and complete customer support.

Treatment with the LightSheer INFINITY can be carried out all year long, enabling a rapid return on investment.
Choose the ideal spot size for each treatment:

To effectively treat all body areas and hair types, the LightSheer INFINITY offers two mechanisms of action the High-Speed low-fluence vacuum assisted handpiece and the highfluence ChillTip™ adaptor with a variety of spot sizes that can be easily switched on the handpiece.

High Speed Handpiece - utilizes the Vacuum Assisted technology to treat large body areas. This spot size provides fast and comfortable treatment.

Variety of ChillTip™ Adaptors - utilize integrated contact cooling Sapphire technology with by high fluence. Chose between spot sizes, designed to treat small to medium size areas.
How it Works

How Vacuum Assisted Technology Works

Vacuum gently draws skin into the handpiece, skin is stretched thin and target is pulled closer to the energy source.

Energy is applied to target in which melanocytes are spread apart and blood flow is constricted.

Target is damaged and skin is released.

Advantages

Efficacy: by stretching the skin there is a reduction in competing chromophores and the laser energy is delivered more efficiently. With darker skin types that have high concentrations of Melanocytes this advantage has even greater significance.

Safety: Due to the proximity of the target to the energy source, less energy is absorbed by the epidermis and lower fluence is required.

Pain Reduction: the Vacuum mechanism activates tactile and pressure skin receptors to naturally block the transmission of pain to the brain during the treatment.

Fast: with a spot size of 22x35 mm, large areas can be treated rapidly, without the need for cooling or anesthetics.

How ChillTip™ Works

1. Skin is cooled before and during treatment.

2. Skin is compressed*. Laser beam applied to skin and target is damaged.

*Compression of the skin is not recommended when treating vascular lesions

Advantages

Safety: epidermal protection is achieved through ChillTip contact cooling.

Comfort: by continuously cooling the skin, pain and discomfort are significantly reduced.

Efficacy: compression of the skin rotates the (hair) follicle closer to the surface, blanches blood vessels and reduces competing chromophores. For darker skin types this advantage is more significant since their Melanin concentration is higher.
With the LightSheer INFINITY, Lumenis perfected its well-established innovative technology. By leveraging the clinically validated advantages of the 805nm wavelength — speed, comfort, safety and efficacy to an additional wavelength — the 1060nm — Lumenis created a versatile dual wavelength system and introduced the next generation of laser hair reduction.

**Warnings and Risks:**

Treatment should not be attempted on patients with the following conditions in the treatment area: any active infections or inflammatory skin conditions, Dysplastic nevi, tattoos, active cold sores, open lacerations or abrasions, viral, fungal, or bacterial diseases or a history of post-inflammatory hyperpigmentation. The most common immediate responses of laser treatment for hair removal, vascular lesions, pigmented lesions are erythema, edema, perifollicular edema and perivascular edema, vascular bleaching, hyperpigmentation and hypopigmentation or textural changes of the treated areas.

The complete list of contraindications and risks can be found in the LightSheer INFINITY user manual.
“In my clinic there is a high-demand for hair removal from large body areas. With INFINITY’s High Speed handpiece I can complete a leg or back treatment in less than 10 minutes. The hair removal results are consistent with other devices that are associated with much greater discomfort. Over the years I have tested many hair removal technologies and I strongly feel that Lumenis’ LightSheer INFINITY is in a class of its own.”

E. Victor Ross, M.D.

“The LightSheer INFINITY sets the bar for laser hair removal. With two wavelengths and six possible treatment methods to choose from, I have the freedom to tailor treatments to best meet the needs of each patient. I see excellent results every day and the treatments are comfortable. Best of all, I can treat all skin types all year long.”

Omar A. Ibrahimi, M.D., Ph.D.
About Lumenis

Lumenis is a global leader in the field of minimally-invasive clinical solutions for the Surgical, Ophthalmology and Aesthetic markets, and is a world-renowned expert in developing and commercializing innovative energy-based technologies, including Laser, Intense Pulsed Light (IPL) and Radio-Frequency (RF). For nearly 50 years, Lumenis’ ground-breaking products have redefined medical treatments and have set numerous technological and clinical gold-standards. Lumenis has successfully created solutions for previously untreatable conditions, as well as designed advanced technologies that have revolutionized existing treatment methods in each and every one of the verticals we operate in. Our drive for innovation stems from an uncompromising commitment to improving the health and well-being of our patients; addressing new and growing needs of aging populations; and in offering medical professionals cutting-edge solutions that fit seamlessly into the health-economics environment of the 21st century. The world over, we bring Energy to Healthcare.

Platform Specifications:

- Electrical: 100-240 VAC +/-10%, 15 A max. | 50/60 Hz. | Single-phase grounded outlet
- Weight: 58 kg (128 lbs)
- Dimensions (WxDxH): 44 x 50 x 123 cm; (17.4 x 19.7 x 48.5 in)

Indications for Use:

- Treatment of vascular lesions, including angiomatas, hemangiomatas, telangiectasia, leg veins and other benign vascular lesions.
- Hair removal, permanent hair reduction, and the treatment for Pseudofolliculitis Barbae (PFB).
- Treatment of benign pigmented lesions, including age spots, solar lentigines, café au lait spots, nevi of Ota/Ito, melasma, Becker’s nevi and other benign pigmented lesions.
- Treatment of wrinkles (for 1060nm handpieces only).

Use on all skin types (Fitzpatrick skin types I – VI), including tanned skin.
